Hi John,

Sure, webservice is aiming at interop between heterogenous platforms. The key point is that the webservice itself should be ready for interop(it conform to webservice standards and expose standard and correct WSDL document ...).

For consuming realworld webservice, here is an article mentioned consuming amazon webservice on code project:

#Implementing Amazon Web Services in VB.NET
<http://www.codeproject.com/KB/webservices/AmazonWebService.aspx>

also the following msdn sample links some existing public webservives that you can also use for test:

#Consuming a Web Service Sample
[http://msdn2.microsoft.com/en-us/library/ms173022\(VS.80\).aspx](http://msdn2.microsoft.com/en-us/library/ms173022(VS.80).aspx)

If you have any further questions, welcome to post here.

Sincerely,

Steven Cheng

Microsoft MSDN Online Support Lead

Delighting our customers is our #1 priority. We welcome your comments and suggestions about how we can improve the support we provide to you. Please feel free to let my manager know what you think of the level of service provided. You can send feedback directly to my manager at: msdnmg@xxxxxxxxxxxxxxxxxx

RE: Possible to consume a web service with VB.NET 1.1 VS 2003?

ications.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.

Lines: 20

I am at my wits end and turn to you guys in hopes of learning the correct procedure.

For any given web service X, regardless of (and without knowing) what technology was used to create it, is it possible to consume it with either

a

win form or an aspx page developed in VB.net 1.1 and VS2003?

I can create a web service and consume it from localhost, no problem.
But I can't seem to consume external web services, e.g.
<http://www.websvcicex.net/usweather.aspx?wsdl> .

In fact, I would be extremely grateful if anyone point me to even one example of working code that consumes a working web service hosted on a currently accessible remote server so that I can see an intact example of the "whole egg".

Much obliged, and thanks in advance.
