Hi,  
you might be able to do something like this

```
if(window.confirm('are you sure you want to do this?')){  
document.images['img'].src='Page.aspx?answer=yes';}  
else{  
document.images['img'].src='Page.aspx?answer=no';}
```

```

```

Basically you're sending back either yes or no in the querystring to Page.aspx without needing a server roundtrip.

> *Is it possible to grab data from a javascript prompt window that is called from within a webform page with C# as the behind code? I know how to activate the prompt window by calling a routine from an html button in my webform. But I want to be able to send the reply back to the server. In other words, is it possible to create a popup or prompt window that can send data to the server?*
