BTW, the problem is due to ASP.Net not being installed on IIS. Installing the .Net Framework only installs the Framework, not the ISAPIs for IIS.

> I have a windows 2000 machine and added IIS 5.0. I installed Visual Basic
.Net 2003 on the machine and attempted to create a new ASP.NET Web
Appication. I received the following message when attempting to create the
project

>

> "Visual Studio .NET has detected the the specified Web server is not
running ASP.NET version 1.1. You will be unable to run ASP.NET Web
applications or services."

>

> The project is not created. I tried repairing the VB .NET installation
but I still receive the same message. I researched MSDN on the web and went
throught the verification steps to see if IIS was intalled and the .NET
Framework version 1.1 was installed and they are. I am unable to find
direction on how to configure IIS to get ready for ASP.NET 1.1. Do you need
to install the .NET Framework separately than the SDK that comes with Visual
Studio?
