I tried the [http://localhost:81/webapplication\[n\]](http://localhost:81/webapplication[n]), things have progressed. I got an error about ASP .NET 1.1 not being installed, so I installed it by running the asp_regiis program as mentioned in MSDN.

My local path is: c:\inetpub\wwwroot

Checked this item in the settings.

This is where the problems are. When I try to create the web project, i get "The Web server reported the following error when attempting to create or open the Web project located at the following URL:

<http://localhost:81/WebApplication1/>. 'HTTP/1.1 403 Access Forbidden'.

When I restarted the IIS, and visited <http://localhost:81/>, I get "The page cannot be displayed" with the following message: "HTTP 403.1 Forbidden: Execute Access Forbidden Internet Information Services".

Any ideas how to solve this issue?
