im not doing any checks (yet) – i think ive traced the problem to a refresh  
issue – its working for admin fine which is odd  
but what seems to happen is when a button on the left frame is pressed the  
mainFrame isnt refreshed with the new data – you have to force it by right  
clicking and refreshing manually  
im currently opening the mainFrame using  
Response.Write("<script>>window.open('personal.aspx?sendid=" & mainid &  
"', 'mainFrame');</script>")  
looks like i need to force a refresh on the mainframe somehow  
thanks

Mark
