I have an button which calls its Click procedure twice when clicked.  
This is my code :

```
public void btnAddToCartPersonal_Click(object sender,
System.Web.UI.ImageClickEventArgs e)
{
    //validate text boxes
    bool blnEmpty = false;
    string strQuantity;

    //clear label
    lbl1.Text = "";

    for (int i=0; i < dgPersonalNumbering.Items.Count; i++)
    {
        strQuantity =
((TextBox)dgPersonalNumbering.Items[i].FindControl("txtQuantity")).Text;

        if (strQuantity == "")
        {
            blnEmpty = true;
        }
    }

    if (blnEmpty == true)
    {
        lbl1.Text = "Please enter Quantity";
    }
}
```

Does anybody know why it is getting called twice?

Thanks,

Mike
