Is it possible to have multiple web.config files in a given virtual directory in different directories? For example:

<http://localhost/myapp> (Virtual directory maps to C:\MyApp)

<http://localhost/myapp/newFolder> (web folder in the above virtual dir maps to C:\MyApp\NewFolder)

Can I have one web.config file at C:\MyApp and another at C:\MyApp\NewFolder? When I tried to do this, VS.NET web project (during debugging) throws an errors saying that something is wrong at the server? So I compiled the project and tried to bring to navigate to a page in the browser (without debugging), I still get an error. But when I remove the web.config file at C:\MyApp\NewFolder, it works fine.

Any help is appreciated.

Thanks.
