We're using Microsoft.Web.UI.WebControls's Tree Control in our ASP.NET application. I'm aware that this control posts back to the server to refresh the nodes... However there seems to be a problem when SSL is used. The tree control is no longer able to get a trusted connection to the server and fails (the exact error is "The underlying connection was closed: Could not establish trust relationship with remote server.").

Has anyone had any luck getting Microsoft WebControl's Tree Control working over SSL? Any help would be much appreciated.

Regards,
Jeff
