server's cache...thats why it is trying to read from temp asp.net files.

When that page is not requested for some hours i get that error. But when I  
reset IIS page is working fine.

I'm trying to tell you that the stack trace you posted is from the execution  
of a request for a page. I think it is executing  
NstAdvanceUnitSalesTOC.aspx. Either something has requested that page or  
else maybe the cache item expiration is requesting that page. Do you mean  
that the method is dependant on the output cache, or the Cache property?
