Thx alot but i have a question for you:-
can't get `WindowsPrincipal.IsInRole()` to work for me when using
Windows Authentication. Here's a snippit of code from my C#
codebehind page:

```
WindowsPrincipal wp = new WindowsPrincipal(  
WindowsIdentity.GetCurrent() );  
lblUser.Text = wp.Identity.Name;  
Label1.Text = wp.IsInRole(@"DOMAIN\group").ToString();
```

where "DOMAIN\group" is a valid group name. The username shows up
correctly as "DOMAIN\username" but for any non-builtin roles,
`IsInRole()` returns false. Does anyone have suggestions as to why this
is not working?
