Thank you, Scott. I can't wait for your article! Where will it be posted?
Thanks :)

>> *Hello, all. We're building a Web app where we can have any number of questions, which can contain any type of form element -- check boxes, text fields, radio buttons, dropdowns, etc. We'd like to build an admin page so someone can create the questions and store them on SQL Server. The responses from those questions need to then be stored on the database. Is this possible or is it just a pipe dream? If possible, is it so complicated that it's better to just hard-code the questions? Thanks.*
