I have a web application which uses Windows Authentication for user authorization.

I would like to give the user a way of logging out, instead of just closing the browser. Basically I want a Signout option, as used with Forms Authentication and `FormsAuthentication.Signout()`;

But how would I do that?

I have attempted the following:

```
GenericIdentity ident = new GenericIdentity("", "");
GenericPrincipal prin = new GenericPrincipal(ident, new string[] { });
HttpContext.Current.User = prin;
```

```
Session.Abandon();
Response.Cookies["ASP.NET_SessionID"].Value = null;
Response.Redirect("default.aspx");
```

Without luck.

What am I doing wrong?

Is what I want possible?

If yes, how?
