thanks guys,

yeah, i got your point. i agree with you, that as a developer we don't really need any credentials just to proof our capabilities to a prospective client. i agree that all it takes is how we solve the client's problem into a sound, working solutions that can help them running their business.

indeed, all they (prospective clients) needs is just how our solution can solve their problem, effectively and efficiently.

i have several friends that works for some 'beaurocratic dinosaurs' (what a name...:) that conferred several high-profile graduate degree and yet can't have any idea how to build what might a simple IT solution for me.

anyway, thanks a lot for your opinion. i appreciate it.

regards,
andy
