Ken for the sample but i have another Questions below:--

When u click on the SURVEY link it checks if the USER is in the Database if he/she is in the DB it returns access denied Which i have done. And if they aren't INSERT the user..

But getting problems with my stored procedure below:--

```
CREATE procedure oyinbo(@username varchar(50), @password varchar(50) )
as
if exists
-- You cannot register usernames already registered on the database
twice.
(
select username from register where username = @username
)
return 1 else
insert register(username,password) values(@username,@password)
GO
```

It checks the USER and denies it but it never gives me access to the page ...which i think it inserts the user before checking..

My codebehind is :-

```
Sub Page_Load(ByVal sender As System.Object, ByVal e As
System.EventArgs) Handles MyBase.Load
    'Put user code to initialize the page here
```

```
    conn = New
SqlConnection("server=(local);database=mydatabase;integrated
security=true;")
    conn.Open()
    txtuser.ID = Request.ServerVariables("LOGON_USER")

    cmdcommand = New SqlCommand("rote", conn)
    cmdcommand.CommandType = CommandType.StoredProcedure
    param = cmdcommand.Parameters.Add("ReturnValue", SqlDbType.Int)
```

microsoft.public.dotnet.framework.aspnet: Re: Passing Data with Hidden Fields asp.net

```
param.Direction = ParameterDirection.ReturnValue  
cmdcommand.Parameters.Add("@username", txtuser.Name)
```

```
'cmdcommand.Parameters.Add(New SqlParameter("@DateCreated",  
SqlDbType.DateTime, 8))
```

```
'cmdcommand.Parameters("@DateCreated").Value = Now()
```

```
cmdcommand.ExecuteNonQuery()
```

```
If cmdcommand.Parameters("ReturnValue").Value = 1 Then
```

```
    Response.redirect("noaccess.aspx")
```

```
    ' lblMessage.Text = "Username already exists!"
```

```
Else
```

```
    ' lblMessage.Text = "Success!"
```

```
    Response.Redirect("startsurvey.aspx")
```

```
End If
```

```
conn.Close()
```

```
End Sub
```

Anything i'm doing wrong?
