I am trying to re-run SP1 because asp_wp.exe might have a memory leak. It takes up more and more memory and eventually the web server has to be restarted. We have the *same* applications running on a windows 2003 server without any problems.

> *What's your server's environment, .net runtime version, is there VS.NET installed on it?*

Windows 2003, (version 1.1.4322.573), No VS.NET

This server used to be running NT 4.0 -> Upgraded to Win 2000 -> Upgraded to Win 2003

I am trying to run SP1 through the exe - NDP1.1sp1-KB867460-X86.exe

Thanks.
