Yeah, sorry. I gave you bad javascript for RegisterStartupScript:

```
<script runat="server">
private void Page_Load(object sender, System.EventArgs e)
{
    this.RegisterStartupScript("MyInit", "<script>DoInit();</script>");
}
</script>
<script>
<!--
function DoInit()
{
    window.setInterval('foo()', 500);
}
function foo()
{
    document.getElementById('myLabel').innerHTML += 'x';
}
-->
</script>
```

I tried your suggestion and put alerts into both functions and while the first function which has the window.setInterval showed the alert the second function being executed from the setInterval was never executed. No errors appear.

Re: Window.setInterval not working from asp.net

I also put the code into my code behind but received the same results.

thanks

I don't know what the <body> issue is, but in Page_Load try:

```
Page.RegisterStartupScript("mystartscript", "startit();")
```

<http://staff.develop.com/ballen>

If The script below is exeuted from the onload="startit()" in the body tag everything works fine but when I remove the onload and try to execute by using the attributes.add from within the Page Load the window.setInterval will not execute - there is no message but the timer never takes off. I put an alert in the startit() and it did appear so the attributes.add is working ok.

Would appreciate any help

thanks

```
Private Sub Page_Load(ByVal sender As System.Object, ByVal e As  
System.EventArgs) Handles MyBase.Load  
'Put user code to initialize the page here  
Me.Button3.Attributes.Add("onClick", "startit()")  
End Sub  
<SCRIPT>  
function startit() {  
window.setInterval("updateTime()",1000);  
}  
var seconds=0;  
function updateTime() {  
// seconds++;  
var timeNow = new Date();  
var hours = timeNow.getHours();  
var minutes = timeNow.getMinutes();  
var seconds = timeNow.getSeconds();  
var timeValue = "" + ((hours >12) ? hours -12 :hours)  
timeValue = ((timeValue <10)? "0:" + timeValue
```

Re: Window.setInterval not working from asp.net

```
timeValue += ((minutes < 10) ? ":0" : ":") + minutes
timeValue += ((seconds < 10) ? ":0" : ":") + seconds
timeValue += (hours >= 12) ? " PM" : " AM"
document.getElementById("time").innerHTML = timeValue;
}
</SCRIPT>
</HEAD>
<body MS POSITIONING="GridLayout" onload="startit()">
<h1>Sample Document</h1>
<h3>You have been here <b id="time">0</b> seconds.
</h3>
```
