Hello Jorge Thank u for you reply:

here is the code of "global.ascx" plz check this and help me figureout the problem, I would be greatfull.

```
//code
using System;
using System.Collections;
using System.ComponentModel;
using System.Web;
using System.Web.SessionState;
using caribbeansearch.baseobjects;
using System.Resources;
using System.IO;
using System.Threading;
using System.Web.Mail;
namespace Zubair
{
    /// <summary>
    /// Summary description for Global.
    /// </summary>
    public class Global : System.Web.HttpApplication
    {
        /// <summary>
        /// Required designer variable.
        /// </summary>
        private System.ComponentModel.IContainer components = null;
        public static string applicationPath="";
        int count=0;
        protected Zubair.baseobjects.WPUIObjects component;
        public Global()
        {
            InitializeComponent();
        }

        protected void Application_Start(Object sender, EventArgs e)
        {
```

Re: ASP.net Application Problem.

```
applicationPath
=Server.MapPath(System.Configuration.ConfigurationSettings.AppSettings["SiteRootPath"]);
//WPDBProcedureMetaData MetaDataSPXML=new WPDBProcedureMetaData();
//MetaDataSPXML.LoadSPXMLStruct(applicationPath+System.Configuration.ConfigurationSettings.AppSettings["M
//Thread thread = new Thread(new
ThreadStart(Zubair.baseobjects.Emailblaster.ProcessEmail ));
//thread.Start();
}
```

```
protected void Session_Start(Object sender, EventArgs e)
{
Session.Timeout=60;
++count;
Session["VisitorsCount"]=count;
}
```

```
protected void Application_BeginRequest(Object sender, EventArgs e)
{
}
```

```
protected void Application_EndRequest(Object sender, EventArgs e)
{
}
```

```
protected void Application_AuthenticateRequest(Object sender, EventArgs e)
{
}
```

```
protected void Application_Error(Object sender, EventArgs e)
{
try
{
// component=new WPUObjects();
// component.SendGenericEmail("info@xxxxxxxxxx","info@xxxxxxxxxx","Error
in the Site","The error description is as follows : "
+Server.GetLastError().ToString());
}
catch(Exception e1)
{
// string ss=e1.Message;
}
}
```

```
protected void Session_End(Object sender, EventArgs e)
{
}
```

Re: ASP.net Application Problem.

```
protected void Application_End(Object sender, EventArgs e)
{
}

#region Web Form Designer generated code
/// <summary>
/// Required method for Designer support – do not modify
/// the contents of this method with the code editor.
/// </summary>
private void InitializeComponent()
{
this.components = new System.ComponentModel.Container();
}
#endregion
}

//end code.
```

thanx and regards.
