Have Visual Studio.NET installed on MS 2000 Professional OS laptop. No issue ever with web development and SQL connections.

Purchased new laptop with XP Professional SP2!!!!!!! & Visual Studio.NET installed.

Nothing but headaches. Continually getting

System.Data.SqlClient.SqlException : Timeout expired message – The timeout period elapsed prior to completion of the operation or the server is not responding.

Can anyone help with this???. Why error's with LATER versions of your software?

.
