hello all, and first sorry for my bad english.

I'm trying to implement a way to enable unique connexion for user to a web site with VWExpress, dotnet 2.

I use profile to store user information, and so i try this :

- 1) when a user authenticate (in global.asax), i save the session ID to the profile if the old profile value is nothing,
- 2) if the old profile value isnot nothing, i try to delete the old/other session.

but i can't get it work. Well, i don't find how to delete a different session, not the current session.

did someone try something similar ? or where can i found an exemple ?

in fact it's not so important for the website i try to make, but i wish this feature could be implemented in ASP.NET 2.

thanks in advance,
