Hi,

I am facing this problem for quite some time now.
i want to build the asp.net web site from the command line. I dont want to precompile it. I just want to build it as it can be done using the IDE(build web site).
Does aspnet_compiler.exe or msbuild.exe have any switch which can prevent the precompilation and just validate the web site.
Can someone help me on this pls?

Thanks and Regards
Amit
