You can develop even with Notepad if you want to, and compile assemblies from the command-line, but why make programming more difficult for yourself ?

The programming ease which IDEs offer save you much time, by enabling you to insert complicated built-in controls easily.

If you don't have the money to purchase Visual Studio 2003, to program against ASP.NET 1.1, you can use the free Web Matrix :

<http://asp.net/webmatrix/>

You can still compile your assemblies from the command-line, but you can insert all the built-in ASP.NET objects via drag-and-drop.
