I have been struggling with my 'Personal Web Site' for a couple of weeks now. Finally I found the cause and a solution to my DB connection problem. And I was right: There IS a connection leak in the PhotoManager class! However, being an ASP and C#-newbie, I just wasn't man enough to fix it myself... For those of you that have struggled with the same problem (must be quite a few), the solution can be found here:

<http://forums.asp.net/901225/ShowPost.aspx>

(Please read on. The first solution suggested is not the right one...)

Thanks to those in this group who tried to help anyway! Now, let us hope Microsoft fixes this asap. Yes, I know the ASP.NET 2.0 is a beta, but still... I think this one was pretty ugly. And a little weird that so few knew about it...

Bendik
