

Collecting form data when there is not a submit button

I have 4 forms each on a separate page respectively form1.aspx, form2.aspx, form3.aspx, form4.aspx.

On top of each of the four pages there are 4 links which link to the aforementioned 4 pages like this:

Form1 Form2 Form3 Form4

Important: Only form4.aspx has a submit button, none of the other 3 forms has any kind of submit or 'next step' button.

So, how can I collect the data from, say, form1, when the user clicks the link Form2 or Form3 or Form4 to continue?

I know that I can use session for this case, but the problem is, since there is no submit button on form1, form2 and form3, what triggers the action of data-collection from these 3 pages when the user leaves them by clicking the links at the top of the page?

I don't think there is an onLeave function, is there?

Any idea? Thanks a lot!

.
