Hi Thom,

As Steve has mentioned, VS.NET 2005 supports development on .NET framework 2.0 while VS.NET 2003 supports on .NET framework 1.1

Also, for deployment .net application, only .net framework is necessary. VS.NET IDE is required if you'll have to do development on the server.

Thanks,

Steven Cheng

| Visual Studio 2005 supports the .NET Framework 2.0

Re: Framework Support by Visual Studio Versions

| Visual Studio 2003 supports the .NET Framework 1.1
|
| You can install them side by side on the same computer if you have web
| sites
| that use both frameworks.
|
