I have not tried, but worth taking a look:

Hi,

I have installed the full release of Visual Web Developer 2005 express to my system and I have noticed that the ASP.Net configuration page does not show up in my IIS website Properties area. If I build a computer from scratch and install the IE6 update then install VWD it all works fine. I had the same problem while testing the beta versions. Is there a way to install the configuration page manually. I have found that the web sites I create using ASP.Net all work but I have to configure them manually and I would like to be able to use the product the way it was designed to be used. I am running Win2K Pro SP4

Thanks  
Kenneth
