I have the need to have user type in some quantities by a date, and therefore would like to show a calendar on a webform with a different textbox for each day. I was wondering if this was possible to create in ASP.Net. I know you can use the day render event to customize each day. But I don't believe that I could get a textbox in there so that I could get information back. Does anyone know of some sample somewhere on how to do this?

--
TIA

Altman
