-

But why it redirect to login page.

When I click the master page button, it popup window using javascript's window.showModalDialog function as:

```
Response.Write("<script  
language='javascript'>window.showModalDialog('myURL.aspx', "  
'dialogWidth:800px;dialogHeight:600px');</script>");
```

Then, I click the button on the popup window, it will redirect to login page. It is not my expected.

How can I fix it?
