Hello,

VS.net installs sql express as datastore for role/membership management. I don't like this! I'm not able to choose other databases like ms-access, in the Web Site Administration Tool . (Only AspNetSqlProvider)
I've tried some c# stuff, but id did not work for me, to much trouble. I wish to work with vb.net anyway.
Is there a tool/programm or something with less trouble, so i can choose from different providers in the Web Site Administration Tool??

(I tried to configure the iis but.....it did not work)

THX
