Hi Mark,

Welcome to ASPNET newsgroup.

As for the custom membership provider problem, from the description, I think it is likely something not configured correctly for your custom membership provider since the exception occurs at initialize time which is trying to load the membership provider class... Would you provide your class's declaration in source file and how you config it in web.config to us so that we can have a look?

Thanks,

Steven Cheng

| I'm writing a custom MembershipProvider which uses a custom class derived from MembershipUser (basically, the derived class adds a field to the MembershipUser base class).

| When I try to configure my website using the ASP.NET Configuration tool, and go to the Security page, I get the following error:

| Could not load type 'OMLMembershipUser' from assembly 'App\_Code.olsckwwk, Version=0.0.0.0, Culture=neutral, PublicKeyToken=null'.

| Yet OMLMembershipUser is defined in a file in the App\_Code directory.

| Any idea what's causing this problem?

| - Mark
