Hi,

I have a modal dialog box which i'm using to collect user data. what I want to do is when the user clicks the 'submit' button add the data to the database and then call the java script to close the window and pass a value back to the parent page.

I've tried using RegisterStartupScript after the database update function but this doesn't seem to work. Any help would be great.

Rob.

Code is:

```
'add data to db  
addAction()
```

```
'close window  
Dim strScript, strKey  
strKey = "AddAction"  
strScript = "<script language=JavaScript>window.returnValue = document.  
getElementById('txtID').value; window.close();</script>"
```

```
Page.RegisterStartupScript(strKey, strScript)
```
