selectedvalue – "Could not find any attribute selectedvalue of  
DropDownList"

SelectedValue is a property, not an attribute which is an error I would associate with the HTML not the source code. This type of thing happens from time to time when something else in the code has a syntax error and the parser gets confused. Recheck your code formation thoroughly, you have an error.

hi all.

in my code i bind a few dropdownlist boxes's lists, datasource etc. i bind the Selectedvalue property, and everything is fine. then one bright day, WITHOUT ANY CHANGE TO THE DATABINDING CODE, i started getting "System.ArgumentOutOfRangeException: Specified argument was out of the range of valid values". in the IDE i see that scewy line under

This code worked!!!! i can only conclude that somehow databinding order has changed and now selectedvalue binds before the list populates. i have the same issue with a dropdown that has a predefined list, so i really can't see how this is possible.

HELP!!!
