All you have to do is put a file named

App_offline.htm

in the Application's directory.

ASP.NET will detect its presence and any requests for any/all pages in the application will cause that page to be displayed.

Put any information you want your users to know in that page.

Use only "standard HTML" in that page...no scripting or objects.

Hello,

I have a site created by asp net, due to the weekend construction, this particular site need to be shut down during the weekend.

I wonder if there is a quick way to have a page or whatever method (without recompiling the whole apps), so that when users try accessing the page, they will will be prompt that the site is not currently available.

One of my concern is since ppl work on Friday until the end of the day, but I don't, not even weekend. Is there a solution where I can pre-schedule it to stop on Sat morning? (or maybe in the IIS?)

Thanks in advance. Your help would be greatly appreciated.
