You can't use Windows Integrated like that. You'll need Basic

Jeff

I forgot to mention that I don't have forms-based authentication – it is only

Integrated Windows authentication. We have a LAN, and Active Directory accounts etc. Database access is via specified groups of users.

What we want is – if a logged-in Windows user has database rights, they should be able to see data using Internet Explorer and the web forms.

Right

now, even domain admins with full rights can't open the web pages after transferring to the http server. No problems on my local machine using the asp.net in-built development server.

Thanks

Jay

I don't think you need to turn anonymous access off to enable forms based authentication.

(Not sure whether it is a general aspnet problem or a specific security problem, hence posting it in 2 groups).

Re: cannot view web pages after transferring files to web server

This will solve for us a number of problems. I have developed a website on my local machine (part of a LAN) using Visual Web Developer, with ASP.NET 2.0. Backend is a SQL Server 2000 database. All queries and webforms work beautifully on my local machine (file system web project).

However, when I copy this website to a virtual directory on an IIS server, I keep getting permissions denied error, when I try to access any aspx page on the website.

This is what I have done:

1. I have created an ASPNET login for SQL Server and gave it rights to the database.

2. I am using Windows Authentication (IIS Directory Security tab) and Anonymous access is Unchecked.

3. There is `<identity impersonate="true" />` line in the web.config file.

4. Even though I have Windows authentication checked in IIS, I have the following in the web.config file:

```
<authentication>  
<forms name=".ASPXFORMSAUTH"  
loginUrl="logins.aspx" />  
</authentication>
```

Don't know what the above means – it was generated as part of my using the ASP.NET configuration in Visual Web Developer.

5. aspnetdb database is a SQL server 2005 database, on the same machine as IIS.

6. I have tried logging in as many different types of users

Re: cannot view web pages after transferring files to web server

(with full
rights and so on) but I cannot open a single page on the
machine with
the IIS
server.

Pleas help if you can –

Thanks

Jay
