According to my experience, this problem usually occurs when you bound ur script for popup on click event instead of Page\_Load event. What i mean is, you must b having a code say:

```
Button1.Attribute.Add("OnClick", "Window.open("TargetPage.aspx");
```

This code must be put in Page\_Load or in ur case in ItemDataBound event instead of click event or ItemCommand event. Please check if u r binding this script code in ItemDataBound this might solve ur problem.

We have created an ASP.NET application in C#. on a couple of the pages we use datagrid to display user records. one of the columns on this record is to view an images which is displayed in a separate popup window. But while I am clicking first time nothing is happening and displays the images only on the second click. Can you figure it out why it is happening so? I want the images to be displayed on the first click itself.

Regards,
