Hi,

Thank you for your post.

Based on my understanding, your question is about how to redirect both the website name a virtual directory name. If I've misunderstood anything, please feel free to post here.

First, you need to redirect the website by following steps:

1) In IIS management console, open the properties dialog for the website, switch to tab "Home Directory", you can select option "A redirection to a URL" and type in your new website name.

Then you need to create a virtual directory in your new website named "old01", open its properties dialog and redirect to "<http://www.newsite/new01>."

You can now visit "http://www.oldsite/old01/*", it should now redirect to "http://www.newsite/new01/*."

Hope this helps. Please feel free to post here if anything is unclear.

Regards,

Walter Wang (wawang@xxxxxxxxxxxxxxxxxxxxxx, remove 'online.')
