Well, using a dataset isn't going to help you solve your problem, even though it is not at all clear what the problem is.

Norman explained the different between a datatable and a dataset, and the former is fundamentally a collection of the latter.

Maybe you should tell us what the problem is, clearly, and precisely, providing relevant code if necessary.

"Tom" <Tom@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message <news:363C4FB5-98A0-482A-87C3-9E4AF91C637A@xxxxxxxxxxxxxxxxxxxx>

Im' grouping by data in my grid, and I've tried to do that using a dataTable and no luck. I already have a web Form that has a grid that the data is grouped/

"Norman Yuan" wrote:

I do not know why you have to "convert" a datatable to dataset in order to your data manipulating and databinding, chances are that you may not have to.

Regardless, you cannot CONVERT DataTable to DataSet. DataSet is a container that can contain 0 or more DataTable. If you have to place a DataTable into a DataSet, you can

```
DataSet ds=new DataSet();  
ds.Tables.Add(myDataTable);
```

I have a dataTable being returned from my datalayet, I need

Re: datatable to dataset

to convert
it
to
a dataSet so I can do some data manipulation to it prior to
populating
my
datagrid. How can I convert the datatable to a dataset?
