Kevin Attard wrote:

I am using a GridView inside a UserControl which has a template column for deleting the rows. Before databinding the gridview i am attaching the RowCommand and RowDataBound event.

I am using the RowDataBound event to set the commandargument of the delete button. The event is being fired and works fine.

When I press the delete button, the RowCommand event is not firing! and neither is the RowDeleting (the button's commandName is "Delete") Any idea why?

Do not databind on postback.  
Use a construct like:  
If(Not Page.IsPostBack) Then  
GridView1.DataBind()  
End If

If you databind again on postback, the event handling of child buttons is broken.
