Hello Betty,

From your description, I understand when you running an aspx page which contains code to create and use "CDONT" component, you're getting the following error:

```
=====  
Compiler Error Message: BC30807: 'Let' and 'Set' assignment statements are  
no longer supported.  
=====
```

Based on my research, this error is a typical error when we try using some set/let VBscript code(usually used in ASP page) in ASP.NET page(VB.NET),

#'Let' and 'Set' assignment statements are no longer supported
<http://msdn2.microsoft.com/en-us/library/9tzcse0s.aspx>

As you mentioned that this is a classic ASP page, why did you use aspx as the extension, if you use ASPX as extension, IIS6(on windows 2003 server) will always process it through ASP.NET runtime engine.

If this does be a classic ASP page, you need to change it back to .asp extension. And you're right that ASP is disabled by default on windows2003 iis6, you can enable it in the "Web Service Extensions" setting in the IIS6's management console. I've attached a screenshot on the "Web Service Extensions" setting for ASP in this message. (You can get it if you're using Outlook express to visit the newsgroup, please let me know if you can not get it).

If the page is ASP.NET page, you can consider using the .net framework's built-in SMTP components to send email:

** if the page is an ASP.NET 1.1 page, you can use the System.Web.Mail components

RE: Compiler Error Message: BC30807: 'Let' and 'Set' assignment statem

#System.Web.Mail Namespace

<http://msdn.microsoft.com/library/en-us/cpref/html/frlrfssystemwebmail.asp?frame=true>

** if the page is an ASP.NET 2.0 page, you can use the enhanced System.Net.Mail components:

#System.Net.Mail Namespace

<http://msdn2.microsoft.com/en-us/library/system.net.mail.aspx>

In addition, the following faq sites are also very good:

<http://www.systemwebmail.net>

<http://www.systemnetmail.net>

Hope this helps.

Sincerely,

Steven Cheng

Microsoft MSDN Online Support Lead

Get notification to my posts through email? Please refer to <http://msdn.microsoft.com/subscriptions/managednewsgroups/default.aspx#notifications>.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
