Hi Richard,

Based on my experience, this kind of "Access Denied" problem when generating or loading assembly is very likely related to background Anti-Virus or Indexing service. You can find more information here:

#Diagnose "Access Denied" error on Assembly Loading
<http://blogs.msdn.com/junfeng/archive/2004/10/09/240355.aspx>

If you do have Anti-Virus or Indexing service running in the background, you may try excluding the "Temporary ASP.NET Files" folder from the service and see if it works.

If not, you may try to use File Monitor from <http://www.sysinternals.com> and monitor on the server to see the cause of the issue.

I hope this helps. Please feel free to post here if anything is unclear.

Sincerely,
Walter Wang (wawang@xxxxxxxxxxxxxxxxxxxxxx, remove 'online.')

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at
