Hi john,

i already try again and again to setup the DCOM setting, but still facing the same problem, now i have few double

1. bcos which give me under the ASPX

< Object reference not set to an instance of an object.This method or property is not available because a document window is not active. >

And under the event viewer is about the

<

The machine-default permission settings do not grant Local Activation permission for the COM Server application with CLSID

{000C101C-0000-0000-C000-000000000046}

to the user NT AUTHORITY\NETWORK SERVICE SID (S-1-5-20). This security permission can be modified using the Component Services administrative tool.>

so , im thinking is really need to use "network service" user to open the ms word for the first time, bcos i saw some others info which mention that have invlove with the registry, so is any way we can u the particular user to open the msword instead of using the windows login (default), like c:\winword.exe -u "network service" the user to initial the application.

reference:

http://groups.google.com.sg/group/microsoft.public.inetserver.iis.security/browse_thread/thread/9e3af0297b5e01d5/8b

2. another thing is i even add the "network service" under the "administrators groups" to make sure the "network service" can go thru all the application.

3. i have try to use windows 2000, windows xp + office 2003, all are working fine.

many thanks for ur advise

best regards

You may have it configured to run correctly already but that doesn't mean that you can invoke all of the features of MS word. I dont know if invoking the spell checker in word may cause a security problem if it tries to invoke a window on the server for example against an account that has no profile to launch any desktop processes.

Theres an old example here that also references that microsoft article you could take a look at.

<http://www.4guysfromrolla.com/webtech/062402-1.shtml>

Certainly using remote desktop/console would make no difference to whether you could set dcom or not. Personally I would not use word like this, as its not a server product and will cause you no end of performance problems in the end.

Hi John,

thanks for ur quick response, i have seen this article before and also follow the step to do it, but the only one thing different is i use "remote desktop connection" instead of directly goto "console" and do the changes for the DCOM setting, so i changed it just now (using console), but since still the same error, do u think i have to restart the server ? or any other way that we can test for the DCOM.

here have one more information, when i try my web page (which calling the MS word) , then under the "windows task manager" appear the "WINWORD.EXE" under the processes tab and the "user name" is "NETWORK SERVICE" and the event viewer under "system" still give the error.

pls let me know what else information u need , i can provide u ,

many many thanks

hi experts,
im doing some stuff bween th the aspx + MS
Word.chellcheck,
and and which running on my ypc is no
problem (windows xp , activation
by ASPNET), buts someshow when i try to
deploy to server (windows
2003) + IIS 6.0 , hen which giee the error =
Object reference not set to an instance of an
object.This method or
property is not available because a document
window is not active.

and i have try to configure for the
component service, but still
cannot.

from the event viewer which come some
error:
The machine-default permission settings do
not grant Local Activation
permission for the COM Server application
with CLSID
{000C101C-0000-0000-C000-000000000046}
to the user NT AUTHORITY\NETWORK
SERVICE SID (S-1-5-20). This
security permission can be modified using
the Component Services
administrative tool.

and under the windows 2003, activation by
NETWORK Service (not aspnet
)

and the problem is no matter how i add
component service (even

Re: method or property is not available because a document window is not active.

everyone) , the thing still not allow me to
access the DCOM.

i try many things and chk more info from
knowledge base , but still
cannot, so i would like to post this subject
here, hope can get some
help.

best regards
