Steve, nice site.

Off topic, regarding the NumericTextbox example on the site, I'm kinda noob, how do I implement that?

I tried adding in a new class and importing the new namespace into the codebehind and then doing this on the aspx page.

```
<asp:textbox runat="server" OnKeyPress="ValidateNumeric()"/>
```

but 2.0 does not like OnKeyPress

I also tried,

```
<asp:NumericTextbox runat="server" OnKeyPress="ValidateNumeric()"/>
```

but that did not work either.

Perhaps I needed to add it as a new web component or something.. it was not clear to me, maybe I missed something in the docs.

Thanks.

There are a variety of menu controls out there that you could use to spiff up a web site.

Here are some free ones:

Re: menu controls on 2.0 ..

As I surf the net I see so many cool drop down menus.. I'm wondering are most of those non .net or third party? Perhaps I just don't know what I'm doing in vs.net, but the delivered menus do seem kinda lame.

I've read there is no way to remove that little arrow when there are sub menu items? True?

Also, how do build a horizontal menu where individual items have a border around them and transparent or blank spaces between them? do I have to insert my own image to do this? I hope not.
