Hi Mark

Great thanks for your help

James

You need the .Net Framework 2.0. ASP.Net is not an independent download and is part of the framework itself. If you're not doing development stuff, then you don't need the SDK version. You should also be able to download it directly through update.microsoft.com as an optional os component. You can get it at:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=0856EACB-4362-4B0D-8EDD-AAB15C5E0>

Hello

I have the same problem but can only find ASP.net version 1 on my server. How do I get ASP.net version 2? I have searched for it on microsoft but cannot tell what exactly i have to install as it seems like the developer programs.

Many thanks

James

You're trying to run an ASP.NET 2.0 app in a virtual directory which has been configured for ASP.NET 1.1.

Use the ASP.NET tab in the IIS MMC to change the ASP.NET version of your application to ASP.NET 2.0.

Visual Studio 2005 Beta 2 project cannot work in IIS virtual directory

I used Visual Studio 2005 Beta 2 to build a simple new web site.

Default.aspx file is like following.

```
<%@ Page Language="VB"
AutoEventWireup="false"
CodeFile="Default.aspx.vb"
Inherits="_Default" %>
```

```
<!DOCTYPE html PUBLIC "-//W3C//DTD
XHTML 1.1//EN"
"http://www.w3.org/TR/xhtml11/DTD/xhtml11.dtd>
```

```
<html
xmlns="http://www.w3.org/1999/xhtml >
<head runat="server">
<title>Untitled Page</title>
</head>
```

Re: Visual Studio 2005 Beta 2 project cannot work in IIS virtual d

```
<body>  
<form id="form1" runat="server">  
<div>  
  
</div>  
</form>  
</body>  
</html>
```

Default.aspx.vb is like following.

```
Partial Class Default  
Inherits System.Web.UI.Page  
Private Sub Page_Load(ByVal sender As  
System.Object, ByVal e As  
System.EventArgs) Handles MyBase.Load
```

```
Response.Redirect("http://www.microsoft.com/")  
End Sub  
End Class
```

When I run the Visual Studio 2005 Beta 2, it works fine under studio

testing

port. However, when I make an IIS virtual directory to run the default.aspx

under IIS, it gives me following error.

Configuration Error

Description: An error occurred during the processing of a configuration file

required to service this request. Please review the specific error details

below and modify your configuration file appropriately.
