Ok, I've solved.

a)
Run DCOMCNFG.EXE , select Word Application – Properties – select Security and add ASPNET to the Launch and Access permissions list.

or

b)
add `<identity impersonate="true"/>` to web.config

Thanks!

Hello everybody!

I'm developing an ASP.NET (v1.1) web application which includes a reference to the "Microsoft Word 11.0 Object Library".

When I try the following code:

```
...  
...  
Microsoft.Office.Interop.Word.Application app = new  
Word.ApplicationClass();  
...  
...
```

I get an ASP.NET Error "System.UnauthorizedAccessException: Access denied"

What can be the problem?

Thanks in advance!
Bye
