While trying to create new File, i receive the following error=  
message: "System.IO.DirectoryNotFoundException: Could not find a part of the = path=20  
"Y:\Reports.pdf ". The Y: is shared folder of another system and it mapped to the local system.  
The path exists.

The Y: mapping is for \*your\* account, which is not the account the website runs under. Moreover, this ASPNET account is a local account with limited privileges. It can not access the network for example. You might need to run the site impersonate some domain-user that \*can\* access that share \*and\* use the UNC path (\\server\share) to access it.
