Sure Gabriel. This is the exception I get if on my test box if I haven't run the app on my development box very recently:

Exception Text:

Login failed for user 'NT AUTHORITY\ANONYMOUS LOGON'.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.Data.SqlClient.SqlException: Login failed for user 'NT AUTHORITY\ANONYMOUS LOGON'.

Source Error:

```
Line 209: If SqlConnection2.State <> ConnectionState.Open Then  
Line 210: SqlConnection2.ConnectionString = scon  
Line 211: SqlConnection2.Open()  
Line 212: End If  
Line 213: com.Connection = SqlConnection2
```

Source File: c:\inetpub\wwwroot\ClarkCategory\StartFrm1.aspx.vb Line: 211

Does this have anything to do with the double hop problem?

Can you post the exact exception message please?

Gabriel

"SAL" <SAL_@xxxxxxxx> wrote in message news:u2MXJ17HHHA.3312@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

Yeah, I'm not seeing any logs that seem helpful in the event viewer.

Re: Authentication problem continued

However, the line that causes the login failure is where I try to open the connection to SQL Server.

If I take the impersonate="true"

line out of the web.config file, I can no longer log in on my development box either.

What other account might be being used to set the security context for the application pool? I'm not sure about this part.

Login failures are logged to the Application event log therefore try to reconnect and then look at the event log for "login failed" messages.

Gabriel,
thank you for your reply.

I have a SQL Server login established now and I can log in on my development machine but I'm getting the Anonymous login failure on my test box.

my machinename\ASPNET is a user of the database and is a user for the server, it looks like to me.

What other account might be being used to set the security context for the application pool? I'm not sure about this part.

Re: Authentication problem continued

Going by your input there could be 2 problems that I can think off

1) SQL Server is configured for Windows Authentication only and not mixed authentication

2) The account used to set the security context for the application pool of your web site has no access to the other box' SQL Server

Hello,
I'm still
having
trouble
getting my
app to
authenticate
correctly.
I have read
the tips at:

http://www.devhood.com/messages/message_view-2.aspx?thread_id-

and am still
having
trouble
making this
happen
correctly.
Here are my
settings.
SQL Server
2005 db
access is
required
Web page
Anonymous
access is
turned off in

Re: Authentication problem continued

```
IIS.  
<identity  
  impersonate="true"  
>  
<impersonate="true"  
>
```

```
Connection  
string is:  
packet  
size=4096;Trusted_Connection=True;data  
source=NTserver;persist  
security  
info=False;initial  
catalog=MyTest"
```

I pass in my
user name
and
password
as:

```
User  
Id=me;Password=mypassword
```

When I take
out the User
Id and
Password
stuff and
put in:
Integrated
Security=SSPI

I get logged
in, but only
on my
development
machine
and not
another
box.

When the
user name
and
password is
passed in
the
connection
string I

Re: Authentication problem continued

get the
login failed
for User
Id=me

I'm the dbo
of this sql
server
database so
I should be
able to log
in.
However, I
need to be
able to
access this
web page
from
machines
other than
my
development
box also.

Can anyone
help me
with this?
Thanks

S
