David,

Thanks that worked! However, it only works with
System.Data.OracleClient NOT Oracle.DataAccess.Client. When will Oracle
get with the program!?

Well, you can always just use CommandType.Text. And set command text to

```
string sql = @"  
begin  
:p_rv := HDB.PRL_PAY_PERIOD_PAYROLL_PKG.get_rec_final_qtr_count(:p_year,:p_quarter);  
end;  
";
```

This is the exact same block you can use in SqlPlus.

Then bind an output parameter and two input parameters. Be careful, ODP.NET used positional parameter binding by default.

David
