Hi Mark,

Thanks for your reply.

In a ASP.net Application, how does Microsoft Content Management Server comes into the picture?

Thanks

I understand that .NET has few frameworks:

- 1.1
- 2.0
- 3.0

Which one should we use for our web application?

2.0

v3.0 is very badly named – it's not a new version of the Framework, but rather the addition of four core pieces of technology...

Also, we have a few developers in the house, one is more familiar in C#, another is proficient in VB,

can these 2 lang co-exists in one asp.net web application?

Re: dotNet – Newbie Queries: Which Version to use?

Yes, but not easily – this has been discussed to length:
