I'm guessing that ASP.NET account (the account .NET uses to run web sites) does not have at least read access to your web.config file. It seems that for some reason when you created the new folder C:\Inetpub\wwwroot\integrate, it didn't inherit the wwwroot default security settings.

HTH,

Hi there, I recieve this error

Server Error in '/integrate' Application.

Configuration Error

Description: An error occurred during the processing of a configuration file required to service this request. Please review

the specific error details below and modify your configuration file appropriately.

Parser Error Message: An error occurred loading a configuration file:

Access to the path

Re: Configuration Error : Web.Config [No Relevant Source Line]

'C:\Inetpub\wwwroot\integrate\web.config' is denied.

Source Error:

[No relevant source lines]

Source File: C:\Inetpub\wwwroot\integrate\web.config Line: 0

Version Information: Microsoft .NET Framework

Version:2.0.50727.42;

ASP.NET Version:2.0.50727.210

This is the scenario

1. The code was working fine before
 2. I Copy the "integrate" folder, the folder where my code is, and made a backup "copy of integrate"
 3. Then I copy the codes from development to production into the "integrate" folder
 4. Run the code, I recieved the error
 5. I revert back to original folder by DELETING all the files. Open the backup, copy all the files from "copy of integrate" to "integrate" folder.
 6. Run the code, I recieved the same error
 7. IIS Reset
 8. Run the code, same error
- I am totally blur on what's going on here. If the webconfig and all the files are all the same with the original state, why is it giving that error?

Please do help. Thanks in advance.

Re: Configuration Error : Web.Config [No Relevant Source Line]

//Jack

Hi again,

I forgot to include my web.config code

```
<?xml version="1.0"?>
```

```
<!--
```

Note: As an alternative to hand editing this file you can use the web admin tool to configure settings for your application. Use the Website->Asp.Net Configuration option in Visual Studio.

A full list of settings and comments can be found in machine.config.comments usually located in

\Windows\Microsoft.Net\Framework\v2.x\Config

```
-->
```

```
<configuration>
```

```
<appSettings/>
```

```
<connectionStrings>
```

```
<add name="MSPConnString" connectionString="Data Source=JKTGRHXSAPPS2;Initial Catalog=ProjectServer;Integrated Security=True;"
```

```
providerName="System.Data.SqlClient" />
```

```
</connectionStrings>
```

```
<system.web>
```

```
<!--
```

Set compilation debug="true" to insert debugging symbols into the compiled page. Because this affects performance, set this value to true only during development.

```
-->
```

```
<compilation debug="true"/>
```

```
<!--
```

The <authentication> section enables configuration of the security authentication mode used by ASP.NET to identify an incoming user.

```
-->
```

```
<authentication mode="Windows"/>
```

```
<!--
```

The <customErrors> section enables configuration of what to do if/when an unhandled error occurs during the execution of a request. Specifically, it enables developers to configure html error pages to be displayed in place of a error stack trace.

```
<customErrors mode="RemoteOnly" defaultRedirect="GenericErrorPage.htm">
```

Re: Configuration Error : Web.Config [No Relevant Source Line]

```
<error statusCode="403" redirect="NoAccess.htm" />  
<error statusCode="404" redirect="FileNotFound.htm" />  
</customErrors>  
-->  
</system.web>  
</configuration>  
//Jack
```

Hi Konstantinos,

I hvn't checked the security permission for web.config. Would you mind explaining more on "C:\Inetpub\wwwroot\integrate, it didn't inherit the wwwroot default security settings."

How to make it inherit the default security settings?

Thanks

.
