I had a problem with this a couple months ago and managed to get it working. This included poking a few holes in BlackIce and disabling a feature (BOP) in McAfee Virus Scan. This was a test case, and the ports were blocked until permission was granted to use this solution.

Now I've got the ports open, and what was working two months ago no longer works. BlackIce was disabled to no noticeable effect. We've been on the phone with MS Tech Support and they're not getting us anywhere. Any suggestions, clues, etc. would be appreciated.
