Hi

We are working on a multilingual website. it has five URL (one original and four alias) for all the five languages. we are using RewriterRule in web.config to rewrite the Url. All this working fine on my local machine but when we have upload it on live we are facing a problem. that RewriteRule doesn't working for the alias name. it means when we request any page with alias name RewriterRule not works properly

Example :

main website is Webcarhire.com
and alias is webcarhire.fr

when I request a page webcarhire.com/contactus.htm – the RewriterRule works fine

but

when i request a page webcarhire.fr/contactus.htm – the RewriterRule is not working

Note : I have assign the worker process to .htm and .html page in ISS
and also

I have add following rule in web.config

```
<RewriterConfig>  
<Rules>  
<RewriterRule>  
<LookFor>[^\.fr].+\.htm</LookFor>  
<SendTo>~/BlankPage.aspx</SendTo>  
</RewriterRule>  
</Rules>  
</RewriterConfig>
```

RewriterRule not working for alias domain name

Please let me know if any one have solved this problem.
